

Incident Analysis Summary

Project: Production Debugging Case Study

Observation Date: 12 June 2026

Problem Statement

During an online vehicle insurance renewal attempt, the workflow became unusable due to unexpected UI behavior. Blank and overlapping modal dialogs prevented the user from proceeding with the renewal process.

The objective of this investigation was to analyze the issue, collect evidence, and document observations for further technical review.

Investigation Approach

The issue was investigated through:

- Cross-browser reproducibility testing
- Browser DevTools inspection
- Console log analysis
- UI behavior observation
- Documentation of findings and hypotheses

No access was available to application source code, backend services, or internal logs.

For detailed findings, evidence, and recommendations, refer to the accompanying presentation.
